K22.710 BE with low grade dysplasia
K22.719 BE with dysplasia, unspecified
Other: _____

SPECIMEN REQUIREMENTS

Nine (9) positively-charged glass slides with serial sections taken at five (5) micron thickness from formalin-fixed, paraffin-embedded tissue blocks:

- That have not been treated with Bouin's reagent, eosin, methylene blue, mercurochrome or other dyes;
- That are labeled with ≥2 patient unique identifiers and serial section number;
- One of which is stained with hematoxylin and eosin according to ordering institution's standard protocol;
- The remaining eight of which are unstained;
- That are freshly prepared and shipped to Cernostics in less than 48 hours after sectioning. Ship Monday-Thursday for overnight delivery in a Cernostics collection kit to the address above;
- For patients with multiple biopsy levels taken at the same endoscopy, the biopsy with the highest diagnosis determined by a GI subspecialist pathologist should be selected for testing (low grade dysplasia > indefinite for dysplasia > non-dysplastic)
- For patients with multiple biopsy levels with the same pathologic diagnosis, the pathologist should select the biopsy block with the largest total area of intact, evaluable esophageal intestinal metaplasia for testing.
